

EOADP

Earth Observation Application Development Program

The Earth Observation Application Development Program (EOADP) aims to maximize the benefits of Earth-observation activities. The program supports industry in devising ways to use satellite data generated during any mission that Canada takes part in. Applications developed through the program can be used for commercial purposes or to meet government requirements.

The program is:

- Increasing the accessibility and use of satellite data
- Encouraging the development of innovative applications
- Raising the level of expertise and competitiveness of Canadian industry
- Preparing industry to benefit from technology advances in Earth observation
